

Learning WeApp Day 3 Instructions

Step 1:

You are given 2 folders named 'Day 3' and 'Day 3 Completed' respectively. For 'Day 3 Completed' I have completed the problems for Day 2. You can either copy and paste your click() function to 'Day 3' folder or choose 'Day 3 Completed' to continue your work. (I recommend you to use your own click() function because I'm not professional enough to teach and I don't want to mislead you. But if you are stuck, you are welcome to use 'Day 3 Completed' and see if it can help you to move on)

Step 2:

For today's practice, you will only need to edit the "pages/index/index.js" file.

I have added four more buttons: '(', ')', '%', 'CE' respectively.

You need to make sure all these four buttons work correctly so that your calculator can do the calculations as indicated below.

$(4 + 3) * 25 + (52.3 - (-2.38)) = 229.68$

click 3, click 4, click '.', click 3, click 5, click CE result: 34.3

click 3, click 4, click '.', click 3, click 5, click CE, click CE, click CE result: 34

click 3, click 4, click '.', click 3, click 5, click CE, click CE, click CE, click 2, click '.', click 9
result: 342.9
